

DNCS LLC:
**The key to unlock
 the potential of Your
 Dairy Enterprise**

The "Black Box"

The Future of Improving Your Dairy Business is Here and

"Black Box" versus "White Box" Approach to Dairy

Do you, and/or your managers, view your dairy operation as a "Black Box"? Generally speaking, a "Black Box" is one where all that is known about a business are the inputs, outputs, and cash flow. When financial statements show a positive balance, it is assumed that the system is working and in control. How do you know this though? Could a positive cash flow be a fluke?

There is a better way!

DNCS LLC approaches the dairy as a "White Box". Using a combination of technical skills, developed and honed through years of development and implementation, coupled with enterprise analysis methods developed, and proven, by DNCS LLC President Thomas Tylutki PhD, each system within the dairy is evaluated. The concept revolves around the principles of continuous improvement, quality control, and Six Sigma methodology. This proven approach has been shown to increase productivity, profitability, employee satisfaction and retention, as well as providing management with routine key indicators of business health.

Why Routine and On-Going Consulting?

The dairy enterprise is an integrated web of complex biological systems. Unlike a manufacturing site where production reliability can be held at high levels with little difficulty, dairy production (and thus profitability) is impacted by shifts in temperature, season of year, changes in feed quality, changes in cows, etc. Thus,

routine calibration (at least monthly) is required to ensure consistency, quality, and continuous improvement.

Why DNCS LLC?

DNCS LLC is a joint venture bringing American and global experience with dairy and beef together with Ukrainian and Russian nationals to provide local solutions to your dairy enterprise. We are a registered Ukrainian Company headquartered in Kyiv. Our team is dedicated to working with your dairy to meet your strategic goals for today and the future.
